Portfolio: portfolio-9923v6f3s-maliidi-yaswanth-s-projects.vercel.app

EDUCATION

R.M.K. College of Engineering and Technology, Chennai, India
B.E. in Computer Science & Engineering (Cyber Security) • *Honors Degree in AI & ML* CGPA: 8.45/10.0

TECHNICAL SKILLS

- **Languages:** Python, Java, HTML5, CSS3, SQL
- **Backend Frameworks:** Flask, RESTful APIs, SQLAlchemy (ORM)
- **Databases & State:** MySQL, MongoDB (Mongoose)
- **Authentication & Security:** Auth0, OAuth 2.0, OpenID Connect, JWT (JSON Web Tokens)
- **DevOps & Cloud:** AWS (Amazon Web Services), Docker, Jenkins (CI/CD), Git, GitHub
- **Libraries & Tools:** aiohttp, Streamlit, Pandas, NumPy
- **API Integrations:** OpenAI, VirusTotal, Google Maps API, OpenStreetMap API, OpenWeather API

PROFESSIONAL EXPERIENCE

Python Full Stack Developer Intern — Gradtwin Services Pvt. Ltd. Jan 2026 – Mar 2026
Unified Project Development

- Engineered a carbon footprint analyzer by integrating a Decision Tree machine learning backend with a modular Flask structure, utilizing Blueprints to secure authentication and streamline resource routing.
- Designed dynamic frontend templates and engineered REST APIs to connect user inputs with prediction models, deploying the production-ready application securely on Render with protected database credentials.

AI/ML Developer Intern — Mainflow Services Jun 2024 – Aug 2024
Intelligent Email Threat Shield

- Developed an intelligent Spam Mail Detector application leveraging Natural Language Processing (NLP) models to classify raw text inputs and isolate malicious spam structures.
- Integrated the Gmail API to securely fetch live user emails and combined it with the VirusTotal API to dynamically scan incoming file attachments for hidden executable threats.
- Engineered a clean, interactive user dashboard using Streamlit to display threat analysis logs, text spam scores, and real-time scanning analytics.

TECHNICAL PROJECTS

Dynamic Traffic Management & Intelligent Routing System

- Developed a smart traffic routing solution using **A* and Dijkstra's algorithms** to compute optimal paths and decrease transit congestion across municipal networks.
- Integrated the **Google Maps API** and **OpenStreetMap** to fetch real-time coordination data and live congestion updates to dynamically predict route waiting times.
- Built a dual-interface utility web app where general commuters receive traffic notifications while traffic police can dynamically mark blocked routes and broadcast alternate paths in real-time.
- Created an AI chatbot trained on local traffic rulebooks using a dynamic document integration framework to provide instantaneous legal and regulation clarifications.

Secure Session Weather Engine & Forecasting API

- Developed a weather intelligence platform implementing the Python 'requests' library to fetch current weather conditions and extensive 30-day forecasted data from the **OpenWeather API**.
- Engineered token-based session management using **JSON Web Tokens (JWT)**, securing API routes and protecting local data transactions.
- Implemented enterprise-grade authentication using **Auth0** and **OAuth 2.0** to facilitate secure user login procedures without storing confidential passwords in a database.

CERTIFICATIONS & ACHIEVEMENTS

- **AWS Training Partner Certification:** Accredited validation in cloud operations, resource architecture, and AWS services management.
- **NPTEL Certifications:** Standardized certifications in *Computer Networks* and *Python for Data Science*.
- **SkillRack Profile:** Completed **1,306 programming challenges** and earned **10 Golden Badges** for consistent, high-performance algorithm design.
